

# **Extracting and Visualizing Stock Data**

## Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

## **Table of Contents**

- Define a Function that Makes a Graph
- Question 1: Use yfinance to Extract Stock Data
- Question 2: Use Webscraping to Extract Tesla Revenue Data
- Question 3: Use yfinance to Extract Stock Data
- Question 4: Use Webscraping to Extract GME Revenue Data
- Question 5: Plot Tesla Stock Graph
- Question 6: Plot GameStop Stock Graph

Estimated Time Needed: 30 min

### **Define Graphing Function**

pkgs/main/linux-64

In this section, we define the function make\_graph. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
def make_graph(stock_data, revenue_data, stock):
    fig = make_graph(stock_data). shared_xaxes=True, subplot_titles=("Historical Share Price", "Historical Revenue"), vertical_spacing = .3)
    stock_data_specific = revenue_data[revenue_data_Date <= '2021-06-14']
    revenue_data_specific = revenue_data[revenue_data_Date <= '2021-04-30']
    fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date, infer_datetime_format=True), y=stock_data_specific.Close.astype("float"), name="Share Price"), row=1, col=1)
    fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date, infer_datetime_format=True), y=revenue_data_specific.Revenue.astype("float"), name="Revenue"), row=2, col=1)
    fig.update_xaxes(title_text="Date", row=1, col=1)
    fig.update_yaxes(title_text="Order", row=2, col=1)
    fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
    fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
    fig.update_yaxes(title_text="Revenue"($US Millions)", row=2, col=1)
    fig.update_yaxes(title_text
```

## **Question 1: Use yfinance to Extract Stock Data**

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

Using cache

In [4]: Tesla = yf.Ticker("TSLA")

Using the ticker object and the function history extract stock information and save it in a dataframe named tesla\_data. Set the period parameter to max so we get information for the maximum amount of time.

In [5]: tesla\_data = Tesla.history(period="max")

Reset the index using the reset\_index(inplace=True) function on the tesla\_data DataFrame and display the first five rows of the tesla\_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

In [6]: tesla\_data.reset\_index(inplace=True)
 tesla\_data.head()

ut[6]:		Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
	0	2010-06-29	1.266667	1.666667	1.169333	1.592667	281494500	0	0.0
	1	2010-06-30	1.719333	2.028000	1.553333	1.588667	257806500	0	0.0

	4	2010-07-06	1.333333	1.333333	1.055333	1.074000	103003500	0	0.0

## Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork/labs/project/revenue.htm Save the text of the response as a variable named html\_data

In [7]: url='https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm'

html\_data = requests.get(url).text
#print(html\_data)

Parse the html data using beautiful\_soup .

In [8]: beautiful\_soup = BeautifulSoup(html\_data,'html5lib')

Using BeautifulSoup or the read\_html function extract the table with Tesla Quarterly Revenue and store it into a dataframe named tesla\_revenue. The dataframe should have columns Date and Revenue.

► Click here if you need help locating the table

```
## for ondex, table in enumerate(tables):

## for index, table in enumerate(tables):

## table_index=Index

## table_index=Index

## table_index=Index

## table_index=Index

## table_index=Index

## col=row.find_all("ta'):

## col=row.find_all("ta'):

## date=col[0].text

## revenue=col[1].text.strip().replace("$","").replace("","")

## table_index=Index=Index

## table_index=Index

## table_index=Index

## revenue=col[1].text.strip().replace("$","").replace("","")

## table_index=Index

## index=Index

## index

## in
```

#### Out[9]: Tesla Quarterly Revenue(Millions of US \$) Tesla Quarterly Revenue(Millions of US \$).1

0	2022-09-30	\$21,454
1	2022-06-30	\$16,934
2	2022-03-31	\$18,756
3	2021-12-31	\$17,719
4	2021-09-30	\$13,757

Execute the following line to remove the comma and dollar sign from the Revenue column.

In [10]: #tesla\_revenue["Revenue"] = tesla\_revenue['Revenue'].str.replace(', |\\$', "")

tesla\_revenue = tesla\_revenue.rename(columns={"Tesla Quarterly Revenue(Millions of US \$)":"Date", "Tesla Quarterly Revenue(Millions of US \$).1":"Revenue"}) #Rename df columns to 'Date' and 'Revenue'
tesla\_revenue["Revenue"] = tesla\_revenue['Revenue'].str.replace(', |\\$', "")
tesla\_revenue.head()

/home/jupyterlab/conda/envs/python/lib/python3.7/site-packages/ipykernel\_launcher.py:4: FutureWarning: The default value of regex will change from True to False in a future version. after removing the cwd from sys.path.

#### Out[10]: Date Revenue

0	2022-09-30	21454
1	2022-06-30	16934
2	2022-03-31	18756
3	2021-12-31	17719
4	2021-09-30	13757

Execute the following lines to remove an null or empty strings in the Revenue column.

#### In [11]: tesla\_revenue.dropna(inplace=True)

```
tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the tesla\_revenue dataframe using the tail function. Take a screenshot of the results.

#### In [12]: tesla\_revenue.tail()

#### Out[12]: Date Revenue

48	2010-09-30	3
49	2010-06-30	2
50	2010-03-31	2
52	2009-09-30	4
53	2009-06-30	2

## **Question 3: Use yfinance to Extract Stock Data**

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is GME.

#### In [13]: GameStop = yf.Ticker("GME")

Using the ticker object and the function history extract stock information and save it in a dataframe named gme\_data. Set the period parameter to max so we get information for the maximum amount of time.

#### In [14]: gme\_data = GameStop.history(period="max")

Reset the index using the reset\_index(inplace=True) function on the gme\_data DataFrame and display the first five rows of the gme\_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

# In [15]: gme\_data.reset\_index(inplace=True) gme\_data.head()

```

## Question 4: Use Webscraping to Extract GME Revenue Data

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named html\_data.

In [16]: url = 'https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html'

Parse the html data using beautiful\_soup

```
In [17]: html_data = requests.get(url).text
#print(html_data)
In [18]: beautiful_soup = BeautifulSoup(html_data,'html5lib')
```

Using BeautifulSoup or the read\_html function extract the table with GameStop Quarterly Revenue and store it into a dataframe named gme\_revenue and store it into a dataframe named gme\_revenue and store it into a dataframe named gme\_revenue and store it into a dataframe should have columns and dollar sign is removed from the Revenue column using a method similar to what you did in Question 2.

► Click here if you need help locating the table

:		Date	Revenue
	0	2020-04-30	1021
	1	2020-01-31	2194
	2	2019-10-31	1439
	3	2019-07-31	1286
	4	2019-04-30	1548

Display the last five rows of the gme\_revenue dataframe using the tail function. Take a screenshot of the results.

```
In [20]: gme_revenue.tail()
```

```
        Date
        Revenue
